Subject: RE: Water Plan Volume 1 & New Articles for Vol 4

Dear Paul,

I didn't get as far as I wanted to on this project, and I will be out of the office until April 4 -- so this is it:

1 - On the Selected Water Prices in California

http://www.waterplan.water.ca.gov/b160/PRD_preview2/Vol_4/01-Background/5-WaterPrice.pdf

- On page 2 - Please indicate the year for Urban Water Costs for Typical Single Family Households table (also I'm not exactly sure what a Uniform Rate is - I hope this is in the Glossary)
- On page 1 (last table) - It would good if we could update these to 2004 or 2005 numbers. Given the number of agencies represented by the AC, we should be able to do this (I have the latest schedules for CVWD & IID).

This is a very useful & informative section. I am so glad it is in this report.

2 - I would like to suggest a paper to include in the Crop Consumptive Use section. I hoped to finish reading it before I had to send you this last email in the comment period, but I haven't managed to do that. The paper is by Andrew Keller (Keller-Bliesner Engineering) and David Seckler (IWMI) - both authors are on the Board of Editors of Winrock Water which is where I found the paper. Andy & I were Ph.D. students together at Utah State University.

The title of the paper is ***Limits to Increasing the Productivity of Water in Crop Production***. (The paper notes that this is an extract from a manuscript under review for publication in a special issue of *Irrigation Science* & that comments would be appreciated).

Here is the link for the paper, please have folks check it out & include it if they think it is worthwhile.

Thanks to everyone for all their work. I'll see you April 14th.

Anisa
